Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

Claims 1-5, 9-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura in view of Azar et al. Applicants arguments have been considered but deemed not persuasive in view of the new references. Nakamura et al teaches that crystalline and non-crystalline shell can be used as a shell resin in a toner note Col. 12 lines 1-20. That the toner has waxes with other additives to improve the images in an image forming method. The glass transition temperature is within the range of applicants' however the amount of the crystalline resin in the shell layer is not stated. The amount will control the physical properties of the shell and would be within the skilled workers range in adjusting the relationship between the shell and core. Azar et al Col. 8 teaches the relationship of the core and shell in the development by heat and pressure of an image. Suitable polymeric shell materials have a viscosity higher than the polymeric core material and a glass transition temperature of above about 45°C. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to have the amount of crystalline polyester in the shell of a toner that will have the needed physical properties for the development of the image in combination with release agents (wax) and known additives.

1. Claims 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
